

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) ~~A personal~~ Personal-interface portable device for electronic card games, ~~characterised in that it includes comprising:~~
 - a thin display screen ~~(10)~~;
 - a tactile detection faceplate superimposed on the thin display screen,
 - control circuits for acting on a game display using the thin display screen in response to the actions detected by the detection faceplate, and
 - an interface with a central system having a display screen and capable of ~~that can execute-executing~~ electronic games,said control circuits and said interface being capable in cooperation with said central system of displaying a set of cards on said thin display screen, selecting a card among said displayed cards, and extracting a selected card from the set, causing said selected card to be displayed on the display screen of said central system or to be transferred to a set of cards displayed in an identical device of another user.
2. (Currently Amended) ~~Device-A device~~ A device according to claim 1, ~~characterised in that~~wherein the thin display screen ~~(10)~~ and the faceplate have a concavity that turns, in use, towards the user.
3. (Currently Amended) ~~Device-A device~~ A device according to ~~any of claims 1 and 2~~ claim 1, ~~characterised in that~~wherein the thin display screen ~~(10)~~ and the detection faceplate are mounted on a handle, ~~(20)~~
4. (Currently Amended) ~~Device-A device~~ A device according to claim 3, ~~characterised in that~~wherein the handle ~~(20)~~ houses the interface control circuits.
5. (Currently Amended) ~~Device-A device~~ A device according to claim 4, ~~characterised in that~~wherein the handle ~~(20)~~ is equipped with a validation button ~~(10)~~ of a choice made in a tactile manner.

6. (Currently Amended) ~~Device A~~ device according to ~~any of claims 1 to 5~~ claim 1, characterised in that ~~wherein~~ the thin display screen (10) and the tactile faceplate have a general circular sector shape contour.

7. (Currently Amended) ~~Device A~~ device according to ~~any of claims 1 to 5~~ claim 1, characterised in that ~~wherein~~ the thin display screen (10) and the tactile faceplate have a general rectangular shape contour.

8. (Currently Amended) ~~Electronic A~~ an electronic game system that can execute electronic card games, characterised in that it includes comprising:

a central system that comprises a display screen that can represent a game board,
and

a plurality of user interface devices for electronic card games, each device
including:

a thin display screen,

a tactile detection faceplate superimposed on the screen,

control circuits for acting on a game display using the screen in response
to the actions detected by the detection faceplate, and

an interface with said central system having the display screen and capable
of executing electronic games,

wherein the control circuits and the interfaces of said devices and said central
system provide the display of sets of cards on said thin display screens, the selection of a
card among said displayed cards in one of said devices, and the extraction of said selected
card from the set for display on the display screen of said central system or on the thin
display screen of another device according to any of claims 1 to 7, linked to the central
system.
